TITLE : PLANNING SYSTEM FOR INTERIOR
ARTICLES

ABSTRACT : **PROBLEM TO BE SOLVED:** To provide a planning system with which the planning of interior articles can be exactly and speedily produced by connecting data in an electronic catalog (CD-ROM) to an internet or an intranet and exchanging these data mutually with another personal computer.

SOLUTION: The main body of personal computer and the electronic catalog (CD-ROM) loaded on the personal computer are constituted so as to exchange the data in the electronic catalog (CD-ROM) through an information transmission provider with the other personal computer mutually, to store data such as the shape, structure, material, color tone and pattern of interior articles as the electronic catalog (CD-ROM), to edit the prescribed data of interior articles for respective rooms as well and further to reload or change the contents of design for the interior articles in respective rooms through a simplified CAD system mounted on the personal computer. Besides, a model set or a model plan arranging a body drawing and prescribed interior articles is stored as data in this electronic catalog (CD-ROM).
